

Roberto Uribeetxeberria member of Artemis Industry Association

Mar 24, 2014

Roberto Uribeetxeberria, researcher at the Faculty of Engineering at Mondragon Unibertsitatea, has been appointed to the Presidium by the Steering Board of Artemis Industry Association. So starting that date, he is Vice-President of ARTEMIS-IA as already shown on the website: <http://www.artemis-ia.eu/presidium>.

This year the ARTEMIS Industry Association organised the sixth annual ARTEMIS Spring Event on 18 & 19 March in Crowne Plaza hotel in Amsterdam. It was a very efficient opportunity for industry, R&D and knowledge centres to shake hands and start exploring the future opportunities under ECSEL-JU.

ARTEMIS has built a sustainable and solid community in Europe, supported by the activities of its Working Groups, which have proven to be valued features of ARTEMIS. As results of their activities ARTEMIS has developed several Centres of Innovation Excellence (CoIE), a Standardisation Agenda, programme Metrics and a label for Tool Platforms. All are important elements for building a solid community, which makes ARTEMIS more than just a funding programme. During the Spring Event 2014, the Working Group meetings were open for all participants.
