

MU participates in the DEWI European project

Apr 09, 2014

The aim of the project is to put wireless systems in fields such as automotive, rail, aeronautics and building. It also aims to provide an interoperability framework so that methods and systems of one field can be used in another, saving costs and time.

The Faculty of Engineering at Mondragon Unibertsitatea, ETIC, and Fagor Electronica representing Mondragon Corporation are partners of this project as well as Volvo, Philips, NXP, AVL and Valeo among others.

Researchers of the Signal Theory and Communications group of the Faculty of Engineering at Mondragon Unibertsitatea attended the kickoff event of the project together with researchers of ETIC, Acciona and Acorde.
